

# STRAIGHT COLLATED NAILS 21° ROUND HEAD, BARBED, M-FUSION

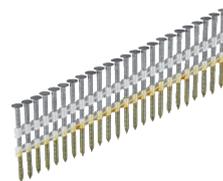

## DESCRIPTION

M-Fusion is a surface treatment with better resistance to corrosion (C4), compared to regular hot dip galvanized surface treatment (C3). The process to treat the surface is more sustainable when using M-fusion.

M-fusion treated nails needs to be painted over, with a water proof paint, shortly after mounting to prevent from zinc-deposit runnings on facades. The same complies to HDG nails as well.

Suitable for all standard tools for 21° nails. NOTE! For min/max length, see each machine's product sheet.

Meets CE requirements according to EN 14592.

## Specification

Surface treatment	M-Fusion
Corrosion resistance class	C4
Application environment	Outdoors

Wood

## Standard Pro Pack
